

## Plan ahead to give your business the protection it needs

Constant vigilance is needed to protect your network and IT infrastructure against attack. Perimeter Testing Annual Packages allow you to benefit from expert security skills, testing your systems periodically throughout the year for vulnerabilities, so you can take action fast.

### Proven track record in Perimeter Testing

Our industry-certified security services partner Espion performs a program of penetration tests that give you an independent, comprehensive, up-to-date picture of your security posture. You'll receive a quarterly report that details any weaknesses and prioritises actions you need to take.

### Benefit from initial and on-going assessment

Your eir account manager works with you to select the best package for your needs, based on the extent of your infrastructure. All packages entail an initial deep-dive assessment followed by quarterly checks to let you take the fastest possible action if weaknesses are found.

### Solve the IT security skills gap, permanently

The IT skills needed to ensure you stay protected aren't just sophisticated, they're constantly changing. An annual package gives you reliable periodic access to the specialist skills that are difficult or impossible for businesses to recruit and retain in-house.

### Stay compliant with legislation and industry standards

The EU and national legislative landscape for IT security is evolving. Keep your company compliant with directives and meet industry requirements, including PCI-DSS, the information security standard governing any organisation handling credit card payments.

Get continuous access to IT and network security experts throughout the year, so you stay ahead of any vulnerabilities

# Your questions answered:

## How do Penetration Testing Annual Packages work?

The annual package combines up-front and ongoing tests:

- ✓ Initial Testing (External Network Penetration, Website & Web App Testing): identifies and tests vulnerabilities in your systems, ranking the vulnerabilities from high risk to low risk. Vulnerabilities are exploited in a controlled way to determine the actual business risk associated with each identified weakness. The resulting report highlights business-impacting network and IT security vulnerabilities so that you can take action.
- ✓ Quarterly Vulnerability Assessments: performed by specialists using industry-standard scanning tools and systems. The assessment is thorough but is performed more rapidly than exhaustive penetration tests, which means less disruption to your business and faster assessment of your security posture.

## Which parts of the IT infrastructure will be scanned?

Our specialists test your external (hosted or mobile) IT infrastructure, Website & Web Application to identify and prioritise vulnerabilities and associated solutions.

## What is the output of the assessment?

A **Quarterly Technical Report** presents detailed findings and a management level summary. The report lets you bring your IT security strategy forward, offering a list of prioritised actions that should be taken now. **Twice annually, eir and a security consultant jointly present your report on-site at your premises to talk through vulnerabilities, risks and actions.**

## Which Package is suitable for me?

Your account manager will help you select the right package based on the number of covered IT systems and web sites.
